Jekyll Island is in the heart of Northeast Georgia. It is a small, quiet, quaint town tucked in the heart of the Blue Ridge Mountains. The town is also home to Camp Sagaway, a non-profit outdoor education and leadership camp where middle and high school students of all faiths are exposed to Judaism, Muslim, and Christian faith traditions. Students are immersed in their communities and leaders of their communities all in a world-class camp setting. In the year following my internship, I would like to go to Jekyll Island to work at Camp Sagaway with students, staff, and volunteers for one day. I'm pretty confident that I would have a great experience there. I'm really looking forward to checking out all that Jekyll Island has to offer. Please consider donating to support my mission to raise money to attend Jekyll Island as a trip and to encourage other interns to try new things and to find what they are truly passionate about.Independent Minds Events Have your say on issues and events that matter to you. The Profumo Affair was a series of public scandals surrounding an alleged sexual liaison between Keeler and the Secretary of State for War, John Profumo. In December, for the first time, two campaigning groups came together to host a free event, 'Notes of a Socialist in Pemberton Green'. This was a discussion about why we need socialism and how the ideas of Marx and Engels still resonate today. We met in a church hall at 12.30 in Pemberton Green, near Balsall Heath. This event was part of the 8th Let's Talk About 'Red Wedge' campaign. Red Wedge was a 1984 campaign by the Trotskyist organisation Mil

The present study addressed the association of PEPCK and G6Pase promoters with polysomes and the intracellular localization of the corresponding mRNAs in 3T3-L1 adipocytes by 3' rapid amplification of cDNA ends (3RACE) assay, primer extension and in situ hybridization. We also assayed the effect of dexamethasone (DEX) on PEPCK and G6Pase promoters. 3RACE assays showed that the mRNAs from PEPCK and G6Pase promoters were incorporated in polysomes as well as GAPDH mRNA. Transcriptional activity of the PEPCK and G6Pase promoters was decreased to about 80 and 50%, respectively, following DEX treatment. The DEX treatment shifted the intracellular localization of PEPCK mRNA from the nucleus to the cytoplasm. In contrast, the G6Pase mRNA remained in the nucleus and no change was found in the intracellular localization of G6Pase mRNA. These results indicate that the promoters of PEPCK and G6Pase are associated with polysomes and their transcriptional activities are decreased by DEX and they may be controlled differently.Sacroiliac joint syndrome: comparing the diagnostic tools.
