Q: How to avoid "a wxWidgets project must provide a wxUSE_XRC and a project generated using the wxUSE_XRC generators can't" I am using a CMake build system for a wxWidgets project. I need to add some extra code to my project which can't be generated using the wxUSE_XRC generators. The problem is that I get an error "a wxWidgets project must provide a wxUSE_XRC and a project generated using the wxUSE_XRC generators can't". How can I solve this issue? I need to generate code for a newer version of wxWidgets than the one used by wxUSE_XRC, so I can't use it. A: The first thing you need to do is to add a "use wxWidgets" directive into your top-level CMakeLists.txt file. You can do this by adding `set(USE_WX ${WX_USE_FLAG})` before `include_directories(${WXW_ROOT})` In your case,
