BatchFileRenamer Activator

Batch File Renamer (Windows only) is a simple utility that makes it very easy to rename files and folders. This program supports renaming multiple files and folders at a time. Batch File Renamer Requirements: Batch File Renamer is a Windows application and requires Windows XP or greater to run. Batch File Renamer Feature Highlights: Easy to use Easy to customize Save profiles for later use Batch File Renamer All screenshots and videos are taken with an Acer Aspire 5500-5370, while the download link can be found at the end of the article. Last update on 2020-09-23. 2021-01-01 13:04 Smart Backup - Auto Backup for Computer Automatically backup all of the files on your computer, complete with previews, passwords, and even modified file dates and time stamps. How it Works Smart Backup is designed to find all of the files on your computer and automatically backup them to a local server using an encrypted connection. When you back up your files, you can view the backups in real-time, as well as the original files, complete with previews and additional file information. All of this is done automatically in a few minutes without any required user interaction. Features Files can be selected or dragged over the program to make them part of the backup. This works for all type of files, including photos, videos, games, music, documents, and more. You can also add other folders by simply choosing them from the Files option in the main window. As soon as the file(s) is/are selected, a preview will be generated showing all of the file contents in a complete and unaltered state. This preview is then saved locally, for easy access to previous versions of the files as well as the ability to backup and restore them at a later date. Each backup is now also stored in the cloud, for automatic backup and restore from a local and online server. Additionally, the program automatically saves the backup to the server when the computer is powered off, so the backup is automatically available the next time you start the computer. Additional Features Smart Backup automatically stores the file name in the backup, as well as the original file name. This ensures that the backed-up file is exactly the same as the original, and the backup is not corrupted by an incorrect file name, as is sometimes the case with other backup software. Smart Backup stores all of the file information

What's New in the BatchFileRenamer?

Download links for Windows XP, Windows Vista, Windows 7, Windows 8/8.1, Windows 10, Windows Server 2008, Windows Server 2012, Windows Server 2012 R2, Windows Server 2016 and Mac OS X here!
