Be sure to check out our full guide to Photoshop Elements to find out all you need to know about this amazing photo editor. How to Create Meme Faces in Photoshop Elements In this article, we will show you how to create meme faces in Photoshop Elements, using only standard graphic tools. This guide requires the Adobe Photoshop Elements 12 or 13 depending on your model. Step 1. Import an Image Open an image that you want to use as a template for your meme face. We recommend to use a high-resolution image, to avoid creating a stretched meme face. Step 2. Using the Content-Aware Fill Tool Select the Content-Aware Fill Tool and click with the left mouse button to copy the filled area of the image on the selected layer. Paste the copy on another layer and press Command/Ctrl + I to invert the selection to leave the copy with a black background. Step 3. Adjust the Settings Set the options below: – Preset = Standard – Opacity = 100% – Feather = 100% – Size = 100% – Spot Heal = 100% – Refine Edge = 5% – Masking Mode = Normal Set the tool to Sketch. Then, adjust the different brush size to get the result you want. This process is faster, but requires more time to get exactly the result you want. Step 4. Create the Eye Opening and Fill It With the magic wand tool, create the eye opening. Draw a vector shape and fill it with white color. The eye should be completely open with no filling. Replace the vector shape with the original shape to fill the hole with the black color. You can add a pixel mask to adjust the eye opening shape if you need more precision. Step 5. Create the Eyebrows Use the magic wand tool to create the eyebrows. Change the Pen Pressure from 0 to 100 and the size of the brush in the settings. Play around a bit with the settings to get the desired result. Step 6. Create the Nose Using the line tool, create a shape that resembles the nose. Apply the same technique as in step 5 to make the nose. Step 7. Create the Mouth With the line tool, create a shape that resembles the mouth. Choose the a681f4349e

Q: Codeigniter 301 redirect to a specific page As you can see in this image the URL has been redirected to I would like to redirect this kind of URL with codeigniter to this one But I don't know how to do this with codeigniter. I have tried to redirect by passing the url in the constructor but it doesn't work at all. I know that this can be done by a rewrite like this : RewriteEngine on RewriteCond %{REQUEST_URI} ^/careers/ RewriteCond %{REQUEST_URI} ^(.*)\$ RewriteRule ^careers/en/careers-jobs/(.*)\$ careers/details/\$1 [R=301,L] But my problem is that the url in the constructor can be up to 5 strings (en/de/fr/...) and I can't make a rewrite for every language. Thanks A: here is the code to handle redirections \$url = trim(\$_SERVER['REQUEST_URI'], '/'); \$url = explode('/', \$url); \$lang = array_shift(\$url); if (in_array(\$lang, ['en', 'fr', 'de'])) \$lang = 'de'; // if language is found it then redirect to this page if (file_exists(\$_SERVER['DOCUMENT_ROOT'] . '/en' . \$lang . '/' . \$lang . '-' . \$lang . '-jobs.php')) { redirect("en" . \$lang . "/" . \$lang . "/" . \$lang . "-" . \$lang . "-jobs.php", 301); } if (file_exists(\$_SERVER['DOCUMENT_ROOT'] . '/' . \$lang . '-' . \$lang . '-jobs.php')) { redirect(\$_SERVER['DOCUMENT_ROOT']
