Don't Sleep Crack PC/Windows

What's New in the?

Don't Sleep is a utility program for all Windows users who don't want their PC to shut down automatically, or in any other way. If you are annoyed by the fact that your PC is going down without your permission, Don't Sleep is for you. What's in this version: For Windows XP users, we have now introduced an integrated "media control panel", with which you can control your screensaver, your volume, or even your screen color, and much more. In addition, a special feature has been added: there is now an option to re-enable blocking after it has been deactivated for a given period of time. This feature is configurable. What's new in this version: Version 1.0.0.2.9: -A function for re-enabling blocking when it was disabled for more than 24 hours. -A special entry on the Options dialog which allows you to set a time for the program to start running. -A checkbox that lets you choose whether a notification window will appear when the blocking function is deactivated or removed. -Added a special button that, when pressed, will allow you to reset your screensaver timeout (also configurable). -Several fixes. What's new in this version: Version 1.0.0.1.5: -Various improvements. What's new in this version: Version 1.0.0.1.4: -Added a "Don't sleep" icon. -Included a special option in the Settings dialog for Windows XP users: the option to set a screensaver timeout in the absence of the screensaver function. -Fixed a number of small issues. No more PC turned off at the end of each day! Sleepy, your PC will not start shutting down or waking up automatically. Now you can schedule a specific time for the PC to wake up and no longer be subjected to the bad habit of turning it off by accident at the end of the day. Don't Sleep™ is designed to be easy to use for everyone and includes special features that make it ideal for those with special needs. You can quickly configure it to perform specific functions when one of the following events occur: - An idle state occurs. This means the computer is turned off and there is no input activity for 30 minutes or more. - The computer is turned on for a long time, such as at night. - The computer is turned off unexpectedly, such as at the end of the day. In addition, you can change the behavior of the program. This means you can decide whether or not you want to turn off your computer when a specific task has been completed. Don't Sleep also has the ability to prevent your computer from waking up or shutting

System Requirements For Don't Sleep:
