Camera modes The most common way to capture images is to use your camera's automatic mode. But some cameras — such as the Nikon D3100 and Nikon D7100 — include the P, S, A, and M modes, which enable you to create special effects by controlling the setting of the camera and its automatic exposure. You can control the shutter speed, aperture, and ISO to create certain effects. When you capture images in automatic mode, be sure to carefully look over the settings of the camera before pressing the shutter button. Otherwise, you may end up with a blurred or otherwise unusable picture. **Note:** If you have a camera that includes P, S, A, or M modes, the exposure mode is usually a button on the camera. Look in the camera manual to see the settings for each mode. To activate the P, S, A, or M mode, follow these steps: 1. **Set the focus to autofocus.** 2. **Check that the Mode dial (on some cameras**

The photo file needs to be open in the editor, or at least have a copy open in the editor (for any changes made). The editor needs to be on a separate tab from the photo. To edit a photo in the Elements, open an image, go to Edit > Edit in Elements. You will see a little window with a title like Elements 7. At the top, you'll see tabs for tools, adjustments and canvas area. The items in the title are used as a shortcut menu for actions in the editor. 1. Let's look at each type of tool in turn. The Paint Bucket tool In Photoshop, this is the Rectangular Selection tool. In Elements, it is the paint bucket. Use it to fill in areas, or just to apply a flat colour, or mask, fill, or other fill. The tool can only fill in areas that have a selection – everything else is cleared by default. The eraser is below the Paint Bucket. This is a handy tool for erasing mistakes or small areas.

In the wake of the debate over Gov. Charlie Crist's choice of Lt. Gov. Napoleon B. "Babe" Duval III to serve as his running mate, a shocking dimension is being exposed about the governor and his alleged mistress: By this time next week, the soon-to-be Republican governor of Florida will be governor-elect Rick Perry of Texas, the winner of the latest and perhaps most contentious Republican presidential primary battle. But, should Perry win the nomination, there's a fierce debate over who will serve as his vice president: former Gov. Arturo Lopez diGenova of Texas, or the governor's current lieutenant governor, Napoleon B. "Babe" Duval III of Florida. "Of the two, I'd go with Duval because he's got a lot more experience and he has a lot more street cred from working in the inner-city," says Duval's campaign co-chairman, Fort Myers developer Ed Maibach. In 1998, Duval was elected lieutenant governor. Less than a year later, he chose to resign to become the administration's chief attorney. Two years after that, his wife, Donna, divorced him. Duval then said he had already told Perry about his divorcée. "I told him, 'I will not be a candidate unless I am going with a non-divorced wife,'" Duval said, according to the South Florida Sun Sentinel, which obtained the sworn affidavit that contradicted Duval's remarks. The Sun Sentinel is owned by the parent company of this Web site. In December, the newspaper published a story that said Perry was aware of Duval's history and made a decision to run anyway. The newspaper's story sparked discussion among political experts. "I can't remember any governor that was less than honest about someone," says Sarasota attorney Art Cusack. One of the foremost Democratic strategists in Florida, Cusack says that, unlike Crist and Perry, each of the past three Florida governors has consistently lied about their marriages. But Cusack adds that Crist's

affair with the woman who would ultimately become his second wife, R. Elizabeth Scales, wasn't as damaging as it might have been. "For what Babe Duval represents, it's a lot more serious," Cusack says. "Crist is looking for a gift-horse." Cusack believes Duval is viewed less in Florida than in the national

IBM's Watson is getting ready to take on Apple's Siri IBM is readying a new version of its intelligent computing system Watson, in time for its second appearance at the tech giant's annual keynote. A representative from IBM announced to attendees of the Goldman Sachs Media, Telecom and Technology Conference yesterday that it was debuting a new version of Watson, its artificially intelligent system. The webcast to the conference was meant to be a fresh look at the so-called "Blue Jeans" generation of AI, a term coined by IBM. As a real-life demonstration, Watson built models on the ability of a shopper to match a product at a retail store to an exact detail, such as a kitchen knife, or an oven. The "Blue Jeans" generation of AI, as IBM is calling it, is actually a long-standing IBM insight that every person is a data scientist, which IBM claims is actually the case. In recent years, Watson has been trying to take on Apple's Siri, Google's voice-based search assistant. IBM has made it clear that Watson isn't Apple's Siri or Google Assistant, and is trying to carve its own lane as the world's leading voice assistant. In previous projects, IBM has demonstrated Watson's ability to understand natural language, speak in casual, everyday language, then translate the speech into documents. IBM has been adding more and more "natural language" capabilities to Watson to test its understanding of meaning and intent. The company has been expanding its approach to the use of natural language to test the power of its computer systems. The newer Watson "as a service" can be called upon to assist customers with the

more common programming tasks. The prototype demo had Watson called upon to offer an answer about a Java error when a programmer was asked to compile a program. Watson proceeded to look up the wrong compiler, and then help the programmer find the right one. In its own research, IBM has found that the vast majority of computing tasks people have engaged in are based on language, and that the vast majority of people are willing to spend the time needed to assist with them. The newest version of Watson that was unveiled yesterday is much more than an answer to a programming problem. The demo also had Watson answer questions about VCRs and even cars. IBM is testing Watson's ability to help a customer find the VCR they were looking for in a hardware store, despite not being able to read the product name
