GIS The Free Vector Graphics Library (FVGL) is a Java library for viewing vector graphics. It is bundled with AutoCAD and OpenOffice. The language of choice for AutoCAD programmers has traditionally been ObjectARX, but beginning with release 17, it is Visual LISP (VLS). The VBA and Visual LISP interfaces are also supported. AutoCAD has a very large, complex and long-standing extensibility model. **Functionality** AutoCAD is the primary CAD application for the majority of AutoCAD users, but is also used as the basis of many AutoCAD-compatible CAD applications including: AutoCAD Architectural and Civil 3D - Architectural and architectural visualization software used in architectural design and construction **DXF/DWG File Formats for Computer-Aided Design:** CAD files (in both DXF and DWG formats) are the primary file formats used in most computer-aided design (CAD) applications, AutoCAD being the most widely used. While the 'Drawing Exchange Format' (DXF) is proprietary to AutoCAD, the 'DWG' or 'Design Web Format' is often used interchangeably in AutoCAD. Other CAD applications, including Microsoft Office, integrate a limited version of DXF or DWG files (AutoCAD's DXF files, AutoCAD DesignCenter's DWG files, and Inventor's DWG files). More recent AutoCAD versions also support the DGN/DWG (2003 release and newer) and dxf files (.dwg,.dxf), while previous versions supported the PRN/ACNF (.prn) and MDW/MIT. The newer DWG format allows for more complex drawings than older formats and has been broadly adopted as the de facto standard for CAD drawing files. CAD software is software used to draw or model parts of a product, such as a building, a car, or a plane. CAD models can be stored as digital drawings, which describe shapes using electronic symbols. Models can be stored in one of two main formats, the more recent DXF and the older DWG. CAD software then is used to create three-dimensional (3D) parts lists from CAD models, similar to three-dimensional (3D) assembly drawings used in industrial production. CAD software is also used to make detailed drawings of the part, which may then be used by more specialist engineers and/ ca3bfb1094
