Although it's such a complex name, the app isn't. It's a simple word counter and keystroke registering app. It could be useful if you'd like to get a rough idea about the number of words you've used on your essay, paper, or report. The app might not recognize all key formations, but it's somewhat useful in understanding how many words you might still have left to use. The interface is basic, even outdated Keeping in mind the number of more accurate competitors existing out there, this program doesn't have any surprising functionality and to top it off, it's paired with a simplistic interface. Ultimately, it does not fit quite well with modern OS systems. It stands out in a poor way. As for the functions themselves, a bit more clarity would have been appreciated. There's an Import Keystrokes and Words button, one Save Words button, two startup-related functions, and a Register

Code command. It's not entirely clear what each does, but aside from that the most important aspect, the word count, sometimes misses a few words. The word count is not entirely reliable. Unfortunately, the word count feature is at best approximate. It does not catch all words. Of course, this doesn't mean the program is completely useless, only that its numbering should remain relative and be taken with a grain of salt. It's great if you'd like to have a rough idea about the number of words used during a writing session, yet it does not help with knowing the exact number. The keystroke function doesn't share the same issue. In fact, it is quite accurate and reliable. Masteralgo Keystroke Monitoring for Count Words is not really an app to write home about. It does offer some functionality but leaves quite a lot to be desired. In terms of looks, it doesn't bode well either. Still, if you need the features it offers, taking into account the functional limitations, you'll find
