2012-01-24 19:43:35 First lady Melania Trump stepped off Air Force One and spoke about her husband's first days in office. She called it a "blitz of a week." "You know what? That woman, that woman was telling you lies about me to make sure that I lost to Hillary Clinton. She wasn't telling the truth, and now look what's happening," Trump said as he bragged about his campaign's strength in the final days of the race. CNN's Sara Murray, Rachel Cooper and Brooke Baldwin are joining Imani Monen. "You know why I would win the popular vote if I was running? Because all of the women, and men, and the people would say, 'Who do you want?' I'd say, 'Vanessa.' And they'd say, 'Vanessa who?' And I'd say, 'Vanessa Carson.' And they would go, 'Ok, we get it.'" – Donald Trump on Oprah WinfreyQ: Logica aritmica utilizando System.out.println(); Estou fazendo um programa em java para aplicar logica de casa para virgula(3,2),ponto(,) e guião. com isso meu professor disse para começar a fazer o programa não dando posso parar naquele grau de avanço por causa de sintaxe e que é ruim porque não tem nada de bom no System.out.println(); que tento usar em cada operador que aplique para não ter uma má fórmula ou mão de mão naquilo, como posso resolver isso? import java.util.Scanner; public class Empresas{ public static void main(String[] args) { Scanner scan = new Scanner(System.in); float num1,num2; do{ System.out.println("Informe um número e valor do primeiro operando para cada vetor");

John Carroll University has been awarded a $10 million grant from the National Science Foundation to establish the Center for PDA Research, which it plans to open later this year. Read more John Carroll University has been awarded a $10 million grant from the National Science Foundation to establish the Center for PDA Research, which it plans to open later this year. As part of its plan to develop the center, which will house 10 to 15 faculty members, John Carroll will also renovate some of its existing classrooms and increase the size of its existing computer labs, said John Carroll Provost Joseph Frueh. The center will provide faculty, staff and students with a range of research and classroom support services, including use of the university's high-tech facilities, on-site research space, small grants and grant writing assistance. The center also will develop a new field of research and scholarship that focuses on pervasive computing — essentially the study of how computers and other electronic devices affect people's daily lives. "The center can be described as the new, enhanced and broadened research and instruction foundation for computer information science," Frueh said. The grant, announced Thursday, is the largest in John Carroll's history. Last year, the university received a $7 million award for its new O'Shaughnessy College of Liberal Arts, which offers degrees in computing, information science and information technology management. The massive NSF grant, which will fund the center for five years, will allow John Carroll to hire some 10 to 15 faculty members in the next three years. The university is hiring for a new career services center and computer science professor in the sciences. The university also plans to recruit 20 research associates, who will provide support services to the center's faculty and student researchers. "It will provide a major boost to university research," Frueh said. "We will be able to make a world-class research center here on campus. It's absolutely mind-blowing." The university also plans to grow its computer labs, to include the construction of a game development lab, and expand its wireless technologies research center, which Frueh said are
