Photoshop's basic editing software Photoshop's basic editing software is the program's basic edits that are the subject of this guide. No matter what you're editing or creating in Photoshop, you will likely be using the basic editing software at some point. Although Photoshop does offer other editing tools as well, you can get by on these to do a lot of basic, common editing. The most important tools to know for any image-editing or creation project are the following. Basic editing tools These are the basic tools that you use in Photoshop to create basic edits. Many tutorials teach this simple as-needed editing, and they'll teach you a lot about the basic features of Photoshop. You'll probably want to be familiar with these before moving on to more complex edits and tools. Basic color tools You will use the basic color tools in your project or editing. The most important color tools to understand are the following:

- The Hue/Saturation tool.
- The Colorize option, which gives the photo an abstract, light-toned filter look.
- Adjustment layers that you can use to alter the color of an image.
- Channel Mixer, which allows you to adjust only color that isn't overcompensated, or "blown out," via white or black. You'll also use this tool to mix colors.

Create an HDR image If you're new to editing, you'll probably want to master the basics before moving on to more complex editing. Once you're ready to move on to editing of more complex projects, you'll want to master the basics first. This simple tutorial shows you how to turn photos into an HDR image. You simply take multiple images, combine them together using the automatic algorithm the program uses, then use the Recompose and Filmstrip tools in the Layers Panel to ensure that you have the images arranged properly before creating the final panoramic image. Figure 1. HDR image combining process Create a faux HDR image If you want a version that has a film-like look, or a sepia feel, you can use the ProPhoto's fake HDR process. This tool allows you to create a faux-HDR effect on an image. The faux HDR gives the look of a gradual exposure shift. Images that are created with a faux HDR have a grayscale look. A faux HDR can be created in

1. How to stop a Photoshop download The big green button at the top-right corner of the screen is the Download button. Drag it and drop the file on your Windows desktop. To stop an ongoing Photoshop download, right-click on the Download button at the top-right corner of the screen, and then choose Cancel Download. To restart a Photoshop download that has stopped, right-click on the Download button at the top-right corner of the screen, and then choose Start Download.

2. High-quality photo-editing tools Elements is a powerful, easy-to-use tool to edit images. It has basic tools such as crop, rotate, red eye reduction, sharpening, and filters. It also has advanced tools such as lens correction, exposure, curves, levels, color balance, and color matching. Photoshop's most powerful editing tools are found in the Standard or the Expert tab. However, they are not available in Elements. The Create and Open dialog box in Elements is the new Photoshop's most-used editing tool. The program's file browser—the program's File menu—is similar to that of Photoshop's File menu. Elements' Tools menu contains Photoshop's most-used editing tools. It is organized in the same order as Photoshop's Tools menu. Elements gives you an easy way to manage presets. Drag and drop any number of them to the Presets folder. The new preset affects all images opened in the program and will appear in the Presets menu. Elements provides powerful editing tools for photographers and graphic designers. However, it does not provide the same level of control as Photoshop does. If you want Photoshop's level of control, you will need Photoshop Elements. Learn how to use the basic editing tools in

Photoshop Elements. To learn how to use advanced tools such as the Lens Correction, Exposure, Curves, and Color Balance tools, visit [Photoshop Elements 13: Advanced Photo Editing. 3.](#)

Transparent backgrounds Sometimes, an image you want to edit has a background that you do not want to have any effect on your edit. For example, an image of a blue background for a picture of a fountain may appear to have a blue background. The background could be a stone wall, blue sky, or the water itself. The Background Color panel in Photoshop allows

Q: Deleting rows from pandas df with matching ids in another df I have the data below:

+-----+-----+-----+ | a| b| c| +-----+-----+-----+ | 1| 1| 1| | 1| 2| 2| | 2| 1| 1| | 2| 3| 3| | 2| 4| 3|

+-----+-----+-----+ And a list of lists containing the unique ids: ids = [[1,2,3],[1,2,4],[2,4],[2],[3,4]]

I am trying to delete rows from the df where the row's ID match a row in the ids list. Ideally, the

output would look like: +-----+-----+-----+ | a| b| c| +-----+-----+-----+ | 1| 1| 1| | 1| 2| 2| | 2| 1| 1| | 2| 3| 3| | 3| 3| 3| +-----+-----+-----+

I have tried to use this code and although I can get the results to

show correctly, I cannot get the last row to delete. for l in ids: currentrow = df.loc[df.index.isin([l])]

df.drop(currentrow, inplace=True) Is there something wrong with my code or is this just the way it

is? A: You need to use mask instead of df.loc to prevent deleting rows without specific conditions,

then use iterrows to delete the rows you want
