AutoCAD basics AutoCAD is a 2D drafting software application, which means that it is used to create 2D images. AutoCAD does not include 3D drafting or editing features. The only

thing AutoCAD does is draw lines and shapes. Starting AutoCAD To start AutoCAD, click the Start Menu icon on your computer's taskbar. Click on AutoCAD. AutoCAD will open and appear in the foreground. When you create a drawing in AutoCAD, your drawing will open in the foreground. After you save the drawing, your drawing

will close and the next drawing you open in AutoCAD will open in the foreground. Navigating in AutoCAD To move the cursor around AutoCAD, use the arrow keys on your keyboard. To view the cursor on the screen, click the mouse and hold the mouse button down. To select an object, either click and hold down the mouse button or drag the

cursor over the object. To create a new drawing, click the New icon on the Home ribbon. You can also open a drawing in a separate window by right-clicking on a drawing and choosing Open In New Window. Right-clicking on a drawing opens a menu of different functions. The key items on this

federal appeals court in
Chicago ruled against the
Obama administration on
Wednesday in a challenge
to the President's
sweeping $4 billion Clean
Power Plan, delivering a
major blow to Obama's
signature effort to combat

global warming. The court's ruling is expected to be appealed to the Supreme Court, but the immediate effect will be to halt the measure's implementation. The 4th U.S. Circuit Court of Appeals in Virginia became the first to hear arguments on the administration's plan to cut carbon emissions from existing power plants.

While it is not the final word on the legal aspects of the rule, it does have the force of law and the two other appeals courts that have heard arguments so far — the 2nd Circuit in New York and the 9th Circuit in California — have been equally critical of the plan's legality. The ruling was a victory for the Republican-led states that

are challenging the rules, and a defeat for the Obama administration. The administration launched its effort to cut power plant emissions in 2012, after concluding that the country's already aging power infrastructure could not easily be upgraded to meet stricter climate requirements. The plan uses the 2009 U.N. climate change deal to set

mandatory carbon dioxide emission targets for power plants and ca3bfb1094

invention relates to footwear, and more specifically to articles of footwear having a plurality of midsole layers with differing modulus values of each layer. Articles of footwear conventionally include two primary elements: an upper and a sole structure. The upper is often formed from a plurality of material elements (e.g., textiles,

polymer sheet layers, foam layers, leather, synthetic leather) that are stitched or adhesively bonded together to form a void on the interior of the footwear for comfortably and securely receiving a foot. More particularly, the upper forms a structure that extends over instep and toe areas of the foot, along medial and lateral sides of the foot, and

around a heel area of the foot. The upper may also incorporate a lacing system to adjust the fit of the footwear, as well as permitting entry and removal of the foot from the void within the upper. In addition, the upper may include a tongue that extends under the lacing system to enhance adjustability and comfort of the footwear, and the

upper may incorporate a heel counter to limit movement of the heel. Various materials are conventionally utilized in manufacturing the various articles of footwear. For example, in many articles of athletic footwear, the upper is formed from a combination of leather, foam, and polymer sheet layers that encapsulate the foot and/or lower leg.

The combination of materials helps provide a comfortable structure that withstands the wear and tear of vigorous athletic activity and other kinds of physical exertion. In addition, footwear components such as ground-engaging structures (e.g., outsole, midsole, etc.) and frames (e.g., upper frames, under frames, stability bars, etc.)

typically comprise various thermoplastics, thermoset materials, or other polymeric materials. Thermoplastic elastomers (e.g., styrenic block copolymers) may also be used in a variety of articles of footwear. In addition, various injection moldable materials such as polyurethane, and the like, may be used in manufacturing such
